Samuel Apakuki Nayacakalou

Technology analyst. Federal Government Cleared. Taking a sabbatical

Greater Sydney Area

Summary

I have been working for Optus for several years now, providing service assurance to Federal Government customers. I pride myself in having extensive techinical knowledge to be able to resolve high severity issues quickly thus minimising customer impact and avoiding financial penalties for the organisation. My troubleshooting skills have enabled me to resolve faults that trace their root cause into a third party telco vendor network, even when the Optus NMC were unable to find fault. Ticket handling, escalation management and conflict resolution skills amongst many other skills have been acquired during my time here at Optus. I am looking forward to using my FinTech skillset to make the transition from the Telecommunications space ideally to a dev role.

Experience

Self-employed

Python Dev

September 2019 - Present (6 years 8 months)

Built an automated trading bot

Back-tested with 1 years worth of (crypto) price data

Ran for 6 months (Jan - Jun 2020)

Return achieved was 1.4% per day (compounded)

Used Cointracking.info to prepare tax report for 60,000 trades

Currently filling in knowledge gaps of the FinTech space through the University of Sydney FinTech Bootcampcamp, in the hope of improving this skillset and the efficiency of the bot.

Optus

Technical Analyst (Tier 1)

June 2007 - November 2024 (17 years 6 months)

Sydney, New South Wales, Australia

- Providing 24x7 technical and monitoring (Moogsoft and StatSeeker, legacy HP Openview) support in the Optus Business GTAC for network infrastructure of Federal Government clients.
- Provide in-depth troubleshooting for Cisco routing, switching, telephony and carriage faults (70%). This minimized breach of SLA hence avoiding large fines.
- Provide implementation and administration support for Cisco networking and Unified Communications (VOICE/Teleconferencing) project work (30%). Efficiency leads to projects coming in under budget.
- Participating in developing and refining documentation and Knowledge Base, processes and procedures. This increases productivity of the team.
- Mentor and motivate colleagues to gain knowledge and ultimately, academic and/or vendor certifications. This raised the baseline of the team's operational technical knowledge.

Education

University of Sydney

FinTech Bootcamp · (September 2022 - March 2023)

University of Technology Sydney

Postgraduate Certificate, Internetworking · (July 2004 - January 2005)

Curtin University

Bachelor of Science, Computer Science · (March 1996)
